ACTUAL ISSUES OF ENVIRONMENTALIZATION OF EDUCATION IN A MEDICAL HIGHER EDUCATIONAL INSTITUTION

Serheta Ihor V.¹

1. Doctor of Medical Sciences, Professor,
Head of the Department of General Hygiene and Ecology
National Pirogov Memorial Medical University, Vinnitsya, UKRAINE

The key issues of the process of greening modern education in general, and medical education in particular, are value orientations of an ecological nature, effective resolution of urgent issues regarding the provision of environmental safety and effective resolution of real environmental problems that exist in the structure of educational disciplines of preventive medicine, its concepts, categories, regularities and postulates. One cannot fail to note the fact that the systematicity of the ideas and principles of comprehensive environmentalization of education lies in their complexity and interdisciplinary nature, implies an inevitable exit into the sphere of practical solutions and actions, leading to the need for conscious mastering of the skills of a healthy lifestyle by student youth and its popularization [1, 2, 3, 4].

That is why various issues of environmental content during the organization of the educational process are considered in the context of analysis and assessment of the level of mastery of the most important educational issues of a number of subjects that are taught in the course of scientific research in the field of university hygiene, during environmental assessment consequences of the effect of the polluted environment on the state of health of the population and the formation of ecologically justified skills in the field of nature management in the case of the performance of direct professional duties. In this regard, it is important to emphasize that if the goal of environmental education in modern conditions is, first of all, the formation of changes in a person's attitude to both his own health and the state of the environment, the development of deep environmental awareness, high environmental literacy and responsibility for the state of the environment, then the environmentalization of education is a continuous, sequential, step-by-

SECTION 16.

MEDICAL SCIENCES AND PUBLIC HEALTH

step process in which all participants of educational activities must be involved, it involves the transformation of social consciousness and the economic system by integrating the ecological imperative into various fields of knowledge, in the construction of the latest models and methods of consumption, the formation of a new system of real overcoming the problems caused by the ecologically destructive content of the modern economy and its real reformation in accordance with the tasks of sustainable development and European integration.

Environmentalization of educational activities during the organization of the educational process at the department involves the study of key elements of environmental protection activities that future specialists in the medical spheres should possess, ensuring the comprehensive integration of ecological aspects of the educational disciplines that are taught, the introduction of modern approaches to the implementation of ecological monitoring of the state of the environment, which involves monitoring the state of the environment and forecasting its changes, systematically providing students with operational information about the state of the environment, conducting scientific research on hygienic diagnostics and comprehensive medical and ecological assessment of the state of various categories of population health in connection with the influence of adverse environmental factors.
